

AUC vs severity, colleague-group3's corruption suite (independent check, not part of mean_area)

tag area per family (no suite mean: see the note)

l-l1-sincos-s11-colleague (colleague) [trained on the standard file]	c_ellipse 0.8330	c_cell_dropout 0.8071	c_edge_truncation 0.7657
h-ref-small-s11-last-colleague (colleague) [2 runs pooled in table, trained on the standard file]	c_ellipse 0.8297	c_cell_dropout 0.8049	c_edge_truncation 0.7640
j1-s11-colleague (colleague) [trained on the standard file]	c_ellipse 0.8313	c_cell_dropout 0.8054	c_edge_truncation 0.7617
h-ref-small-s11-colleague (colleague) [2 runs pooled in table, trained on the standard file]	c_ellipse 0.8293	c_cell_dropout 0.8051	c_edge_truncation 0.7633
c-winner (colleague) [train file not recorded]	c_ellipse 0.8297	c_cell_dropout 0.8017	c_edge_truncation 0.7655
h-ref-small-s22-colleague (colleague) [2 runs pooled in table, trained on the standard file]	c_ellipse 0.8288	c_cell_dropout 0.8056	c_edge_truncation 0.7602

h-ref-small-s33-colleague (colleague) [3 runs pooled in table, trained on the standard file]	c_ellipse 0.8282	c_cell_dropout 0.8027	c_edge_truncation 0.7617
h-ref-small-s22-last-colleague (colleague) [2 runs pooled in table, trained on the standard file]	c_ellipse 0.8275	c_cell_dropout 0.8047	c_edge_truncation 0.7602
c-deepsets-meanpt (colleague) [train file not recorded]	c_ellipse 0.8220	c_cell_dropout 0.7997	c_edge_truncation 0.7430

c_edge_truncation keeps eta <= -3+6s OR eta >= 3-6s (E): the half-planes overlap from s = 0.5, so its s >= 0.6 points are 'drop nearly everything by a per-event coin flip', not edge truncation. Read that panel below s = 0.6 only.
