

Phase 1: every configuration's seeds, against the reference seed band

separability bar between two 3-seed configs = $3 \cdot \sqrt{2 \cdot 0.0030^2 / 3} = 0.0073$

h-ref-small s11: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000487 is PROBE noise, not seed noise

h-ref-full s11: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000133 is PROBE noise, not seed noise

h-ref-small-s11-last s11: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000692 is PROBE noise, not seed noise

h-ref-small-s22-last s22: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000283 is PROBE noise, not seed noise

i-ff256l1 s22: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000085 is PROBE noise, not seed noise

k-k3_jsd s11: 2 benches of ONE checkpoint (same sha256) merged to one seed point; their spread 0.000391 is PROBE noise, not seed noise
